AI DEVELOPER | SOFTWARE DEVELOPER | AI PRODUCT MANAGER

Builder at heart, systems nerd by habit. **I am a 3x Hackathon Winner** building AI that actually ships: Lead Developer of DevKnight, and the mind behind Krew, a Multi-Agent AI Organization that won a national hackathon out of 700+ teams. On GitHub, I maintain open-source projects and production-ready ML utilities, with clean, well-documented code and CI that newcomers can fork and use on day one. I live where clean code meets clever optimization - Java, Python, C++, and C# with end-to-end builds on AWS and Azure, a solid IBM AI Product Manager foundation, and a bias for measurable impact. My Motto Community-driven engineering aren't buzzwords - they're the job.

As the tech lead at Hayy Media, I designed and launched HayyAI as a live AI SaaS, owning architecture, model integration, and product delivery end-to-end—so teams can go from idea to insight in minutes, not weeks; shipping features behind CI/CD, observability, and user-first UX taught ruthless prioritization and production discipline. On the side, I've been building Ginx Clothing into a streetwear movement across India.

INTERNSHIPS

Intern | Monkstack Solutions LLP

February 2026 - May 2026

- Full-Stack Next.js/React App Development
- Development of Three js application for onboarded client
- Azure Postgres Backend & Integration
- Orchestrated full deployments on Azure App Service and Static Web Apps; implemented CI/CD pipelines with GitHub Actions and Docker

Developer | DKCDEVKNIGHT TECHNOLOGIES Pvt Ltd.

October 2025 - February 2026

- Driving the engineering backbone behind our AI products. I architect scalable systems, build intelligent automation frameworks, and ensure seamless integration between design and technology.
- I lead the development of AI agents, backend infrastructure, and product performance optimization turning complex logic into fast, reliable, and elegant code.

Lead Tech & AI | Hayy Media Pvt Ltd

October 2024 - October 2025

- Led end-to-end development of HayyAI as a live SaaS for HayyMedia, owning architecture, model integration, and production rollout with measurable user impact.
- Built CI/CD pipelines, logging/metrics, and error monitoring to ship fast and safely, enabling weekly releases without regressions.
- Designed user-first UX flows and documentation so non-technical teams could go from idea to AI powered output in minutes.
- Coordinated cross-functional delivery (content, design, ops) to prioritize features, reduce cycle time, and keep the product launch on schedule.

Intern | SoftTech Engineers Ltd.

June 2024 - Aug 2024

- Completed Various Functions of live and active Software Products
- Added additional features to File Exportation
- Developed a Way to open Protected .pdf directly using the software to save client time

SKILLS

- Agentic AI Development
- Generative AI
- LLM / Prompt Engineering
- Edge Computing / Optimization
- Python, C++, Java, C# and JavaScript
- UI/UX / Framer / Adobe Apps / Wordpress
- ML Ops/ Deep Learning
- Post Production Deployment (Cloud)

EDUCATION

MIT Art, Design & Technology University, Pune

June 2023 - Present

- **Expected CGPA : 8.7**
- Management Lead at Ideate
- TED X MITADT Team
- Tech Team Code Chef

Bishops School Pune

June 2013 - May 2021

- **Grade : 92%**
- **SAT Score : 1350**
- House Captain
- 3 x Best Basketball Player Award
- School Team Captian (Basketball, Badminton, Volleyball & Cricket)

INTERESTS

- Basketball
- Chess
- Event Management
- Offroading Trails
- Mountain Biking
- Rifle Shooting

AWARDS / PROFESSIONAL TITLES

- **Winner - Smart India Hackathon - SIH 2024**
- **Winner - IEEE INNOVATEX 2026**
- **Winner - Innovation-2k25, College of Engineering Phaltan**
- **IBM - AI Product Manager**
- **Google Cloud - Generative AI Leader**
- **Exam Prep (DEA-C01): AWS Certified Data Engineer - Associate**
- **We Pitch Second Runner Up - MIT ADTU Pune**

CERTIFICATIONS

- IBM: Product Management: Foundations & Stakeholder Collaboration
- IBM: Product Management: Initial Product Strategy and Plan
- IBM: Generative AI: Foundation Models and Platforms
- IBM: Generative AI: Introduction and Applications
- IBM: Generative AI: Prompt Engineering Basics
- IBM: Generative AI: Supercharge Your Product Management Career
- IBM: Introduction to Artificial Intelligence (AI)
- IBM: Product Management: An Introduction
- IBM: Product Management: Building AI-Powered Products
- IBM: Python for Data Science, AI & Development
- University of Pennsylvania - Computational Thinking for Problem Solving
- AWS: Application Integration and Networking
- AWS: Data Analytics
- AWS: Databases
- AWS: Security, Governance, and Compliance
- AWS: Storage
- Google Cloud: Gen AI Apps: Transform Your Work
- Google Cloud: Gen AI: Beyond the Chatbot
- Google Cloud: Gen AI: Navigate the Landscape
- Google Cloud: Gen AI: Unlock Foundational Concepts

PROJECTS - GITHUB

Clause AI - Legal Multi Agentic System

- Built an AI-driven contract analysis platform that detects risk, bias, and ambiguity, and surfaces actionable insights to support fair, data-backed negotiations.
- Designed a contextual intelligence layer that adapts drafting and reviews to a company's voice and risk profile, ensuring consistent, on-brand legal outputs at scale.
- Implemented simulation and benchmarking capabilities to stress-test clauses and compare against industry patterns, improving contract resilience and decision quality.

Krew - Multi Agent AI Organization

- Built Krew, a manager-led team of specialized AI agents that collaborate, critique, and hand off tasks to deliver higher-quality outputs than single-agent systems.
- Engineered enforced collaboration with defined roles, goals, and backstories, plus tracing and guardrails to reduce hallucinations and keep workflows reliable.
- Delivered a production-ready orchestration layer with parallel/sequential pipelines, tool integrations, and observability for repeatable, end-to-end execution.

Anti Proxy Attendance System

- Built an open-source, Raspberry Pi-based biometric attendance system with R307 fingerprint verification to eliminate proxy attendance and ensure auditable, CSV/Excel-ready records.
- Designed faculty-controlled sessions with authenticated start/stop flows and PIN-secured closure, optimizing classroom operations for reliability and speed.
- Standardized UART-based Python integration using Adafruit libraries for reproducibility on commodity hardware, enabling easy forks and campus-scale deployments

AI Powered Crowd Flow Analytical System - Jetson Orin

- Built an edge AI system on NVIDIA Jetson Orin to perform real-time crowd counting, flow analytics, and congestion alerts across multi-camera streams with low-latency, on-device inference.
- Delivered privacy-preserving, scalable deployments with density heatmaps, occupancy thresholds, and operational dashboards to optimize staffing, routing, and safety responses in high-traffic zones.

Image Upscaling Ncnn using Jetson Orin

- Deployed NCNN-based super-resolution models on Jetson Orin for real-time image upscaling using Vulkan-accelerated inference, achieving low-latency enhancement at the edge.
- Optimized pipelines with INT8/FP16 paths and tiling/batch strategies to preserve detail while reducing memory bandwidth, enabling smooth upscale for camera streams and offline batches.

Ride-Sharing-Intelligence-System

- Built a real-time ride-sharing analytics dashboard with Streamlit, MongoDB, and Plotly to monitor rides, drivers, revenue, surge zones, and live geo-mapped trips.
- Implemented simulation, demand-supply insights, and driver performance views with one-click database seeding for instant, demo-ready exploration.

SIH 2025 - Rake Optima

- Built a cloud-native optimization engine using demand forecasting, material-to-rake matching, and multi-objective optimization to generate end-to-end rake plans in minutes with disruption-aware re-optimization. [Rake-Optima-Presentation-SIH-2025.pdf](#)
- Achieved 90–95% wagon utilization with ~30% logistics cost reduction by unifying route planning, loading sequencing, and dispatch scheduling into a real-time decision support workflow.

FedMed Federated Learning for Healthcare Time Series Data

- Built an end-to-end distributed machine learning platform with centralized, distributed, and federated training workflows in Python and React.
- Developed real-time monitoring features (WebSocket-based) to visualize training progress, model metrics, client status, and system topology through interactive dashboards.
- Implemented performance and evaluation analytics, including confusion matrix, throughput/latency trends, and model comparison views to support faster experimentation and decision-making.
